

Extension Activity

Name:		Class:	
--------------	--	---------------	--

Task 1: You are going to have to create a spreadsheet from scratch to show how the spy equipment has changed in weight between 1990 and 2012.

In 1990 the Army boots weighed about three and a half pounds (lb) and in 2012 they weigh only two and a half pounds.

A backpack has reduced from 5 lb to 3 lb over the same time and binoculars have also changed from 2 lb to just 1.5 lb.

A compass and the evening wear have not changed their weight. The compass is about half a pound and the evening wear is around 5 lb.

A wet suit has reduced in weight from 5 lb to 3 lb.

Task 2: Make sure you have used correct titles and formatted your spreadsheet appropriately and save it with a sensible name in your work area.

Task 3: Create a graph to show the data. Format it and save your work.

Task 4: Answer the questions below using your graph.

Question	Your Answer
1. Which pieces of equipment have stayed the same?	
2. Which pieces of equipment have reduced in weight the most?
